

Exploring the Value of Open (EVO)

An Introduction to Open Research

Kristen Ratan, Stratos
Maryrose Franko, HRA

September 7, 2022

Welcome to the HRA EVO Program

- HRA's Open Science Community is sponsoring a one-year Exploring the Value of Open (EVO) Program with monthly webinar sessions, discussion groups, and opportunities to explore open science.
- The EVO program will cover not only the why, **but also the how**, and ways to measure impact of open research policies, practices, and incentives.

Kristen Ratan, Stratos

Salvatore La Rosa, CTF

Covid-19 has been a forcing function for open science

- Publishers opened access
- Researchers shared data
- Preprints were rapidly posted
- Funders shifted focus

The Nelson Memo (OSTP)

August 25, 2022

Guidance:

- US federal funders to make all tax-payer funded scholarly research freely and publicly available
- Without embargo
- Machine-readable
- Adequate metadata
- Includes underlying data

**THE BUDAPEST OPEN ACCESS INITIATIVE:
20TH ANNIVERSARY RECOMMENDATIONS**

PREFACE

The [Budapest Open Access Initiative](#) celebrated its 20th anniversary on February 14, 2022.

To mark the anniversary, the BOAI steering committee is releasing a new set of recommendations based on its original principles, current circumstances, and input from colleagues in all academic fields and regions of the world.

In September 2021 we sought comments from the global OA community on [12 questions](#). In addition to gathering the email responses to our questions, we hosted a series of Zoom conversations with stakeholder groups and regional communities. The comments informed our discussions about the new recommendations and we thank all who participated.

We remain committed to the principles articulated in the original [BOAI statement from 2002](#) and the [10 year anniversary statement from 2012](#). But the history of OA has continued to unfold, for example in the growth of the overall volume of OA literature, growth in the percentage of new research that is OA from

**UNESCO Recommendation
on Open Science**

Open research initiatives

Impact measures that are more meaningful than journal impact factor

Principles for the **F**indability, **A**ccessibility, **I**nteroperability, and **R**euse of digital assets

Panton Principles: data statements, licensing, reuse, and restrictions

Funder collective initiative for Open Access Journals

Building a body of evidence on the impact of collaborative open research

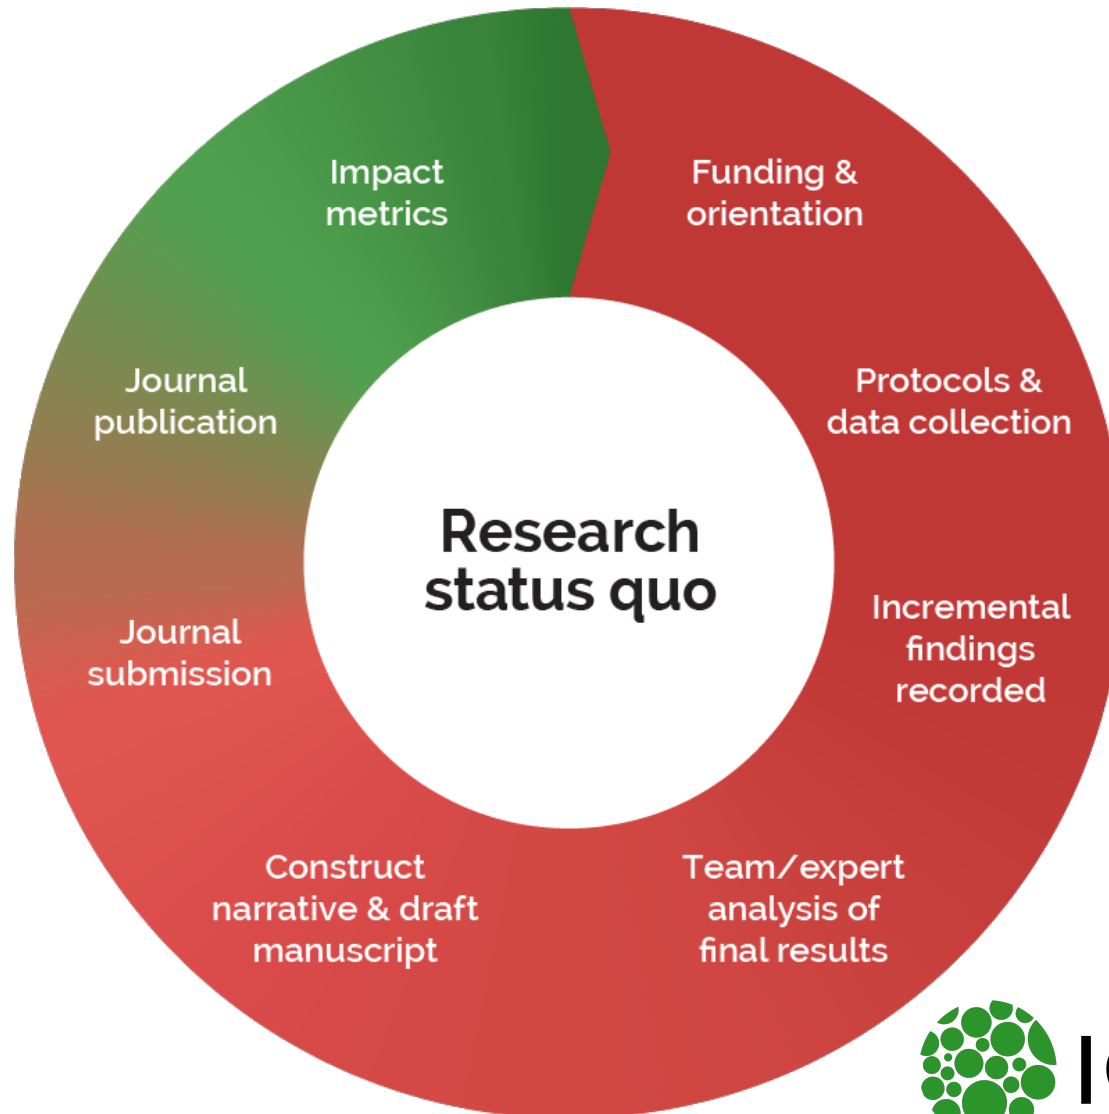

Community-led initiative developing of open research data assessment metrics

Convening critical stakeholders from universities (HELIOS), funding agencies, societies, foundations, and industry to discuss the effectiveness of current incentives for adopting Open Scholarship

Opportunities for Change

Why open science

- Inclusive and equitable
- Fuels collaboration
- Accelerates discovery and outcomes
- Increases reproducibility
- Enables reuse
- Multiplies impact
- Reduces costs
- Ensures persistence and legacy

Open Access – articles, books

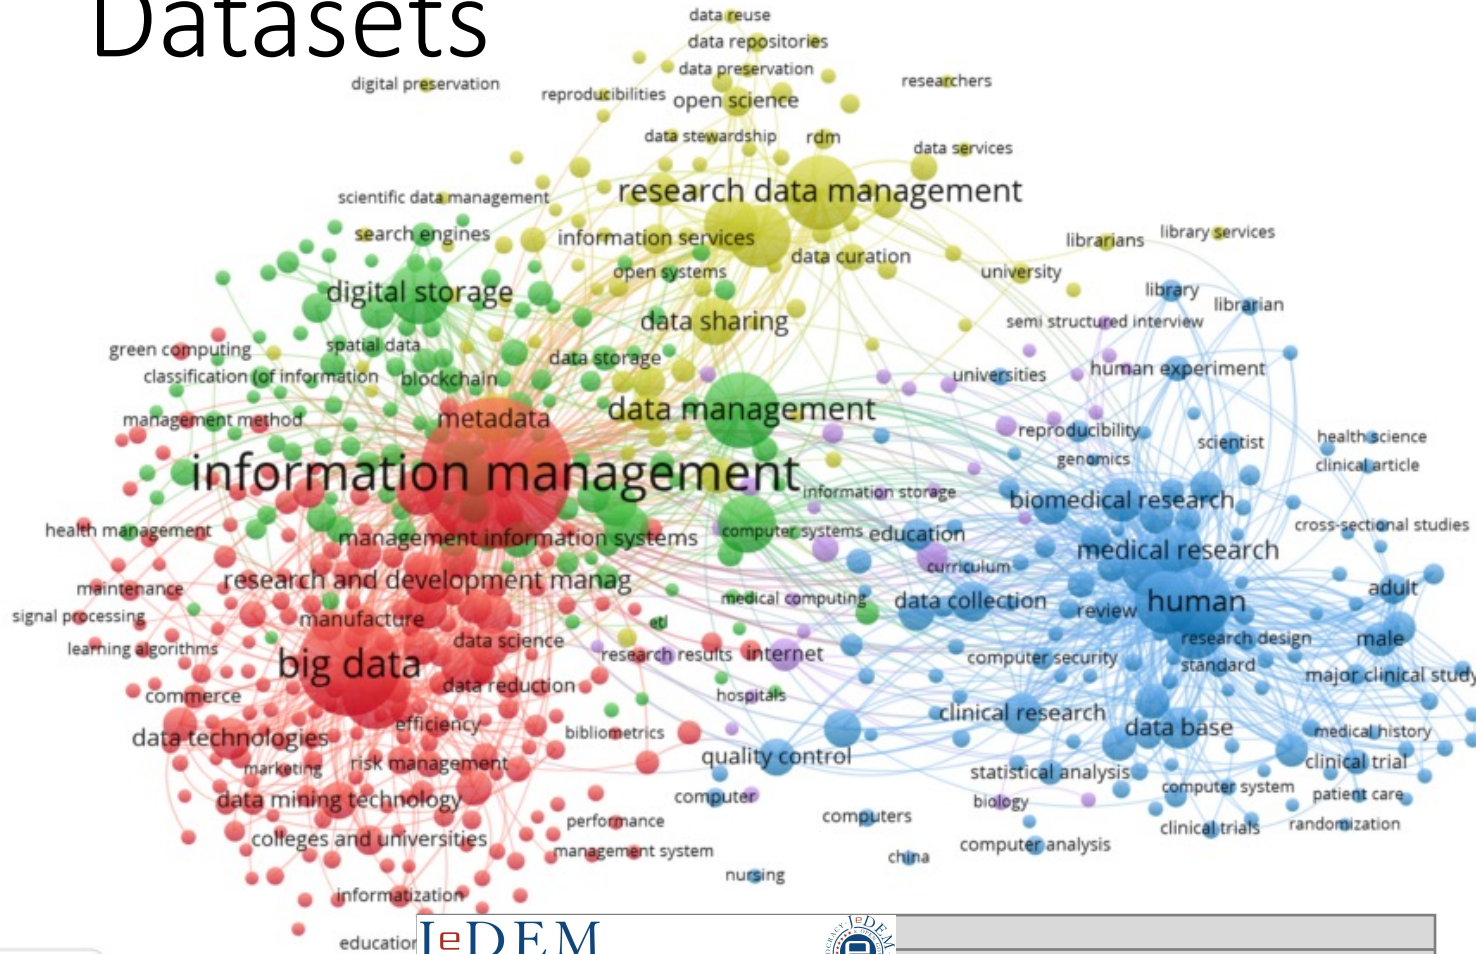

“Studies have provided estimates of the prevalence of OA publications ranging from 27.9% to 53.7%, depending on the data source and period of investigation.”

Aligning Incentives

We must incentivize the behaviors we want

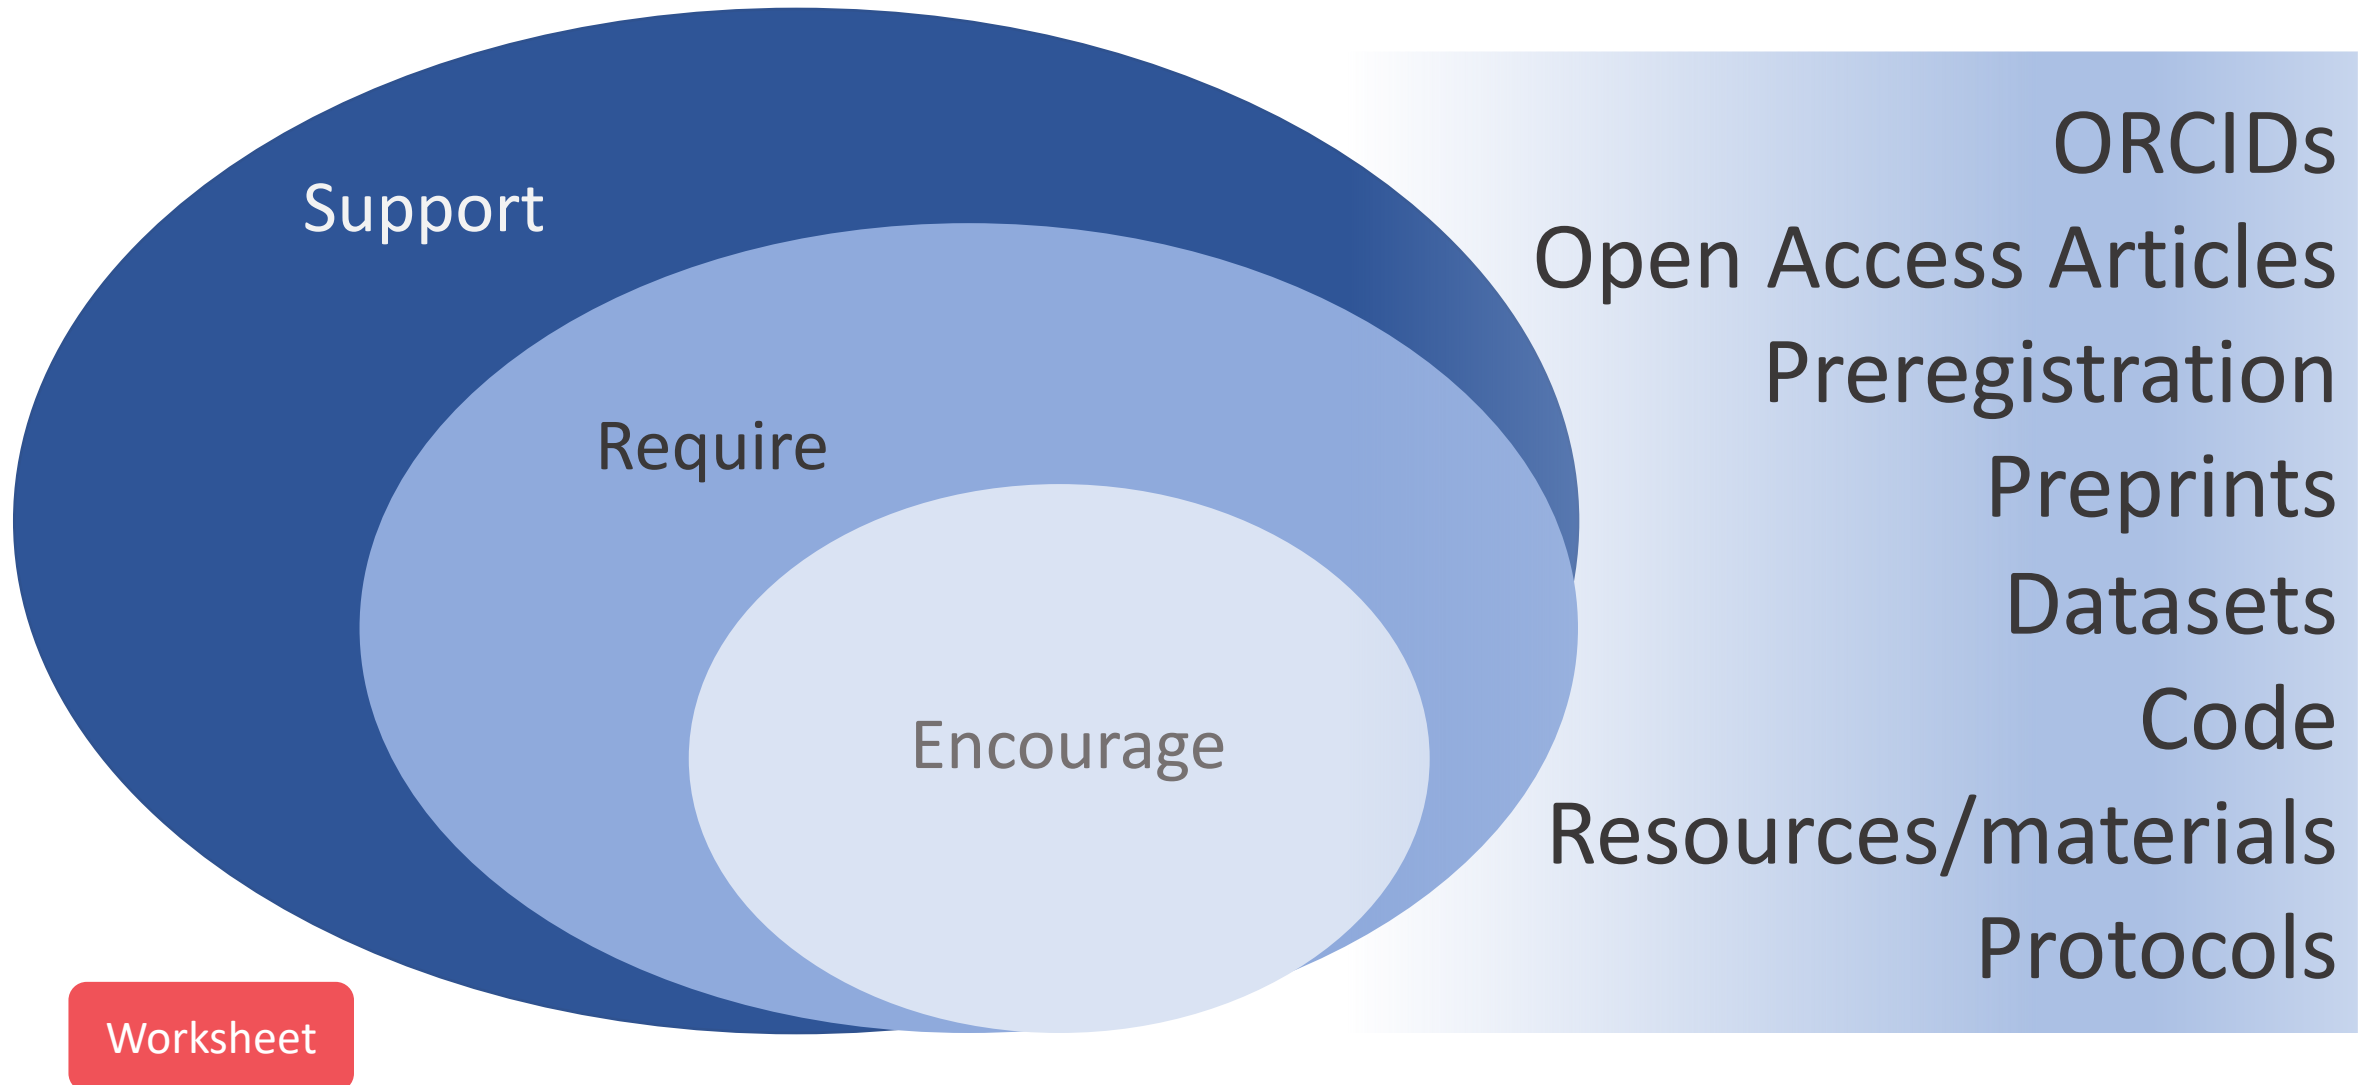

Policy and monitoring shifting away from final article and JIF

Organizational Activities:

- NASEM Roundtable Toolkit
- NASEM 3 sectors of stakeholders
- Open Research Funders Group (ORFG)

A menu of options

Aligning Science
Across Parkinson's

**Uncovering the roots of
Parkinson's disease, together**

Open by Design

- PlanS, including CC-BY
- Mandatory preprint
- Open outputs
- Focus on collaboration

Templeton World Charity Foundation, Inc.

WORLD

CHARITY FOUNDATION

Innovations at the heart of human flourishing

Testing Open

- PlanS, including CC-BY
- Preprint encouraged
- Open outputs encouraged
- New program will test open research requirements

How are you evolving?

Recommended First Steps:

1. Require ORCIDs
2. Review current policies against the menu
3. Conduct a baseline analysis

What's coming next in the series

EVO Program Schedule

Subsequent monthly webinars will be scheduled for **3 pm ET on the second Thursday of every month**. Tentative topics are shown below but will be informed by attendees needs.

Fall 2022 Webinar schedule at a glance:

1. Sept 8, 3 PM ET – EVO Program Launch: Open Science 101
2. Sept 13, 2 PM ET – The Value of ORCID for funders and career progression analysis
3. Oct 13, 3 PM ET- From policy into practice – initiating an open research program
4. Nov 10, 3 PM ET – Data sharing: why, how, and measuring impact

Future topics so far:

- Preprints
- Software and Code sharing
- Protocols and tangible resources
- Data Management Plans and grants management systems
- Career progression (see Value of ORCID)
- Compliance and reporting
- Evidence on the impact of open science
- Research Assessment and how it's evolving

Suggest a topic!

Thank you!

Our mission

Open science is key to realizing our mission!

To accelerate the pace of discovery and inform the path to a cure for Parkinson's disease through **collaboration**, research-enabling **resources**, and **data sharing**.

What does Open Science mean?

“A new approach to the scientific process based on **cooperative work** and new ways of diffusing knowledge by **using digital technologies** and new **collaborative tools**”

[European Commission, 2016b:33](#)

Rationale for Open Science

Facilitating collaborations, research enabling resources and data sharing will accelerate discovery and improve outcomes

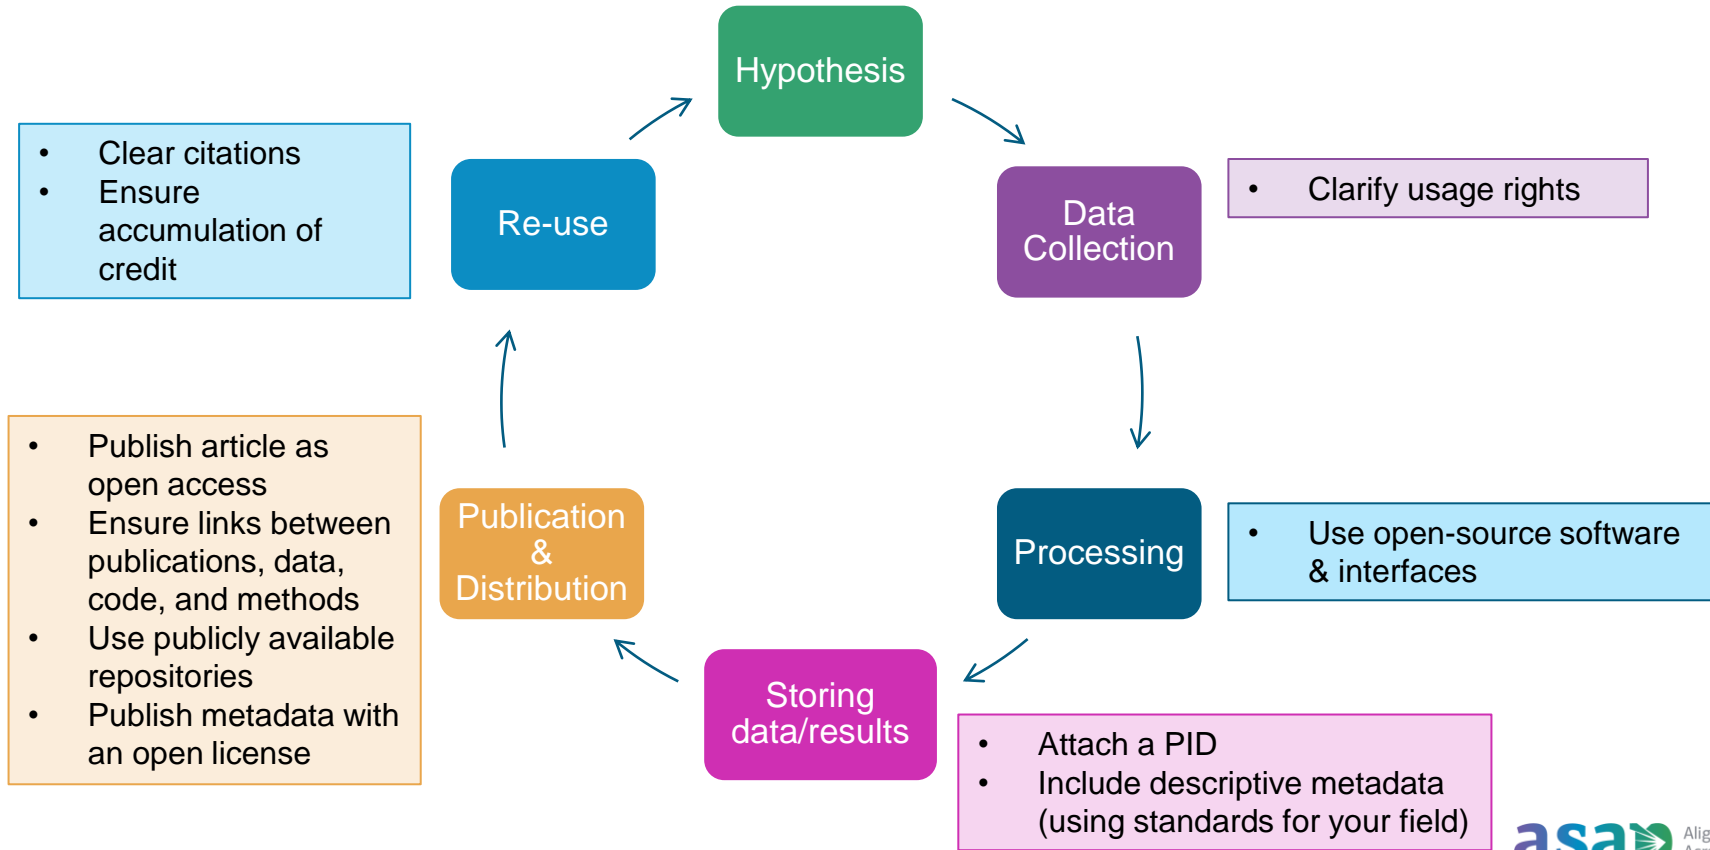

Open science fuels collaboration as research outputs are publicly shared early and often

Funder investments should establishing a legacy of work for future research endeavors

Open Science in Practice

Key considerations in implementing open science for an initiative

Grantee Selection

- **Messaging:** ASAP announcements and publications described it as a collaborative open research initiative from the onset
- **Screening:** Grantees were screened during the pre-proposal stage for a history of collaborating
- **Prior History:** Pre-proposal applications required demonstration of open access publishing and history of sharing datasets, codes, and/or protocols

Educating Grantees

- **Onboarding process** where team leads were instructed on the open science policies and expectations as part of their welcome to the network.
- **Project managers** received additional training to become ASAP ambassadors, educating their team on policy, the importance of collaborative open research and assist with data curation.
- **Detailed Guidelines** are available and are updated regularly

Providing support

- 1 Manuscripts posted in an OA preprint repository upon submission to a journal for review (or sooner).
- 2 Immediate free online access upon publication with grantees retaining copyright via CC BY 4.0 license (or equivalent) for unrestricted reuse.
- 3 All research outputs (data, protocols, code) deposited in publicly accessible repositories and cited in the publication with their permanent identifier.
- 4 Appropriate attributions to ASAP funded work.
- 5 Utilizing our Research Output Management System (ROMS) to track research outputs within the ASAP virtual grantee platform known as the ASAP Hub.

- OA.Works used to help discover ASAP preprints/publications
- Dataseer.Ai used to autogenerate open science assessment reports
 - Invested in automating this process so that the cost goes does for future funders
 - Goal is to create an open source tool chain
- As of 09/2022 – have completed 191 compliance reports.

Providing collaborative tools

ASAP supports digital tools for teams if they would like to take advantage of the service

Protocols.io for protocols
(70% of teams)

Zenodo for datasets and code
(40% of teams)

Google Drive private and secure (80% of teams)

Slack for group chat and discussion
(40% of teams)

Zoom for video conferencing
(49% of teams)

Custom platform to facilitate collaboration and data sharing

Incentivizing open and collaborative research

- **ASAP acknowledges collaboration** throughout the life cycle of a grant with this information formally collated through mid-year and annual progress reports.
 - We ask for names of those outside of the team that have been instrumental as part of the reporting updates
- **Open Science Champions** are called out and recognized through social media & our biweekly newsletters

Lessons learned

- There is a large gap between wanting to do open science and knowing how to do open science.
 - Invested in training resources
 - Hosting monthly meetings with project managers
 - Using preprint as the training step for how the article can be improved
- There are no great compliance tool chains
 - Invested in automating compliance checking (scaled from 8 hours per report to 2.5 hours through automation)
 - Takes trained staff 20 minutes to generate the email based off report
- The open science ecosystem is rapidly evolving so ASAP must continuously adapt its requirements.

How will ASAP continue to contribute?

- Publishing Blueprint and sharing our templates
- Investing in scalable open-source approaches to enable compliance monitoring
- Further research into the costs of open research
- Partnering with our peers – there is power in numbers!

Any Questions?

TWCF's Phased Approach to open research policies

TEMPLETON WORLD

CHARITY FOUNDATION

Nudges

To applicants

TWCF values the open sharing of research outputs. If applicable, describe 1) instances where you have engaged in "open" activities (such as making articles open access and sharing data/code according to FAIR principles), 2) examples of how your open research outputs have been used by others in your discipline, in other disciplines, and/or outside of academia (include DOIs if possible), and 3) plans to engage in open activities in the future.

To grantees

TWCF values the open sharing of research outputs. If applicable, describe 1) instances where you have engaged in "open" activities (such as making articles open access and sharing data/code according to FAIR principles), 2) examples of how your open research outputs have been used by others in your discipline, in other disciplines, and/or outside of academia (include DOIs if possible), and 3) plans to engage in open activities in the future.

To external reviewers

Please note, we encourage reviewers to **consider all valuable research outputs** including preregistration documents, peer-reviewed publications and preprints, datasets, code, software, protocols, and research materials.
